

1 Calibrate intersection

Nearest-cone distance gives an LP score.

$$B_q \cap K(\pi) \neq \emptyset, \quad \theta^\circ \notin B_q$$

2 Certify reward containment

A certified fiber width supplies the bridge.

$$R = \min\{2, 2q + \eta\}, \quad \theta^\circ \in B_R$$

Feasible cone $K(\pi)$ Unit-span fiber $F^o(\pi)$ + Fitted center ★ Latent reward

Exact 16-action geometry · span balls, not Euclidean circles · $q = 0.191, \eta = 0.398, R = 0.781$
